Troikaa Pharma launches Xynova Endo for easy dental procedure

Ahmedabad-based Troikaa Pharmaceuticals has introduced an anaesthetic dosage, Xynova Endo, a Lidocaine lozenge for customised endoscopy procedures in patients.

The unique product is useful for anaesthetising a patient's oral cavity or mouth during endoscopic procedures, according to a company release.

Xynova Endo is an intra-oral anaesthetic dosage form comprising a Lidocaine lozenge mounted on a unique holder just like a lollipop. The holder allows the patient to suck the lozenge gradually by rolling it in the mouth. The product is completely soluble, leaves no undissolved residue and provides a clear field of vision.

Dosing can be initiated by a paramedic 10 minutes prior to the procedure, leading to time saving by the doctor.

The lozenge releases an anaesthetic agent along with a bio-adhesive. This makes the anaesthetic agent stick to the oral mucosa and numbs it within 10 minutes, thereby ensuring better patient compliance due to its pleasant taste, minimal irritation, and reduced need for sedation, the release further stated.
